Empathize & Discover

Date	28-06-2026
Project Name	Software Installation Request Automation
Team ID	
Maximum Marks	

Empathy Map:

User Persona: The End-User / Employee (Requesters) (An employee who needs to request the installation of licensed software through the service catalog).

What does he THINK AND FEEL?

- Wants an easy and intuitive way to request software without confusion.
- Feels anxious about delays in request handling and manual coordination.
- Feels frustrated when there is no visibility into the request status while waiting for access.

What does he HEAR?

- Managers or Security Officers discussing compliance, licensing, and IT governance policies.
- Colleagues mention that requests for licensed software are delayed due to manual approval routing.
- IT Support asking for missing information because previous request methods lacked mandatory fields.

What does he SEE?

- A lack of transparent tracking through centralized platforms.
- IT teams engage in heavy manual coordination to fulfill simple software installations.
- Incidents automatically created when a requested software license is unavailable.

What does he SAY AND DO?

- Submits requests for software requiring specific versions and license justifications.
- Checks for notifications regarding request submission, approval, and completion.
- Navigates the Service Portal to view order status and estimated delivery dates.

Pain & Gain Analysis:

Category	Details
Pain (Fears, Frustrations, Obstacles)	Experiencing delays in request handling and slow software installation. Dealing with a lack of visibility and transparent tracking for submitted requests. Facing rejection or manual back-and-forth due to submitting incomplete requests.
Gain (Wants, Needs, Success Measures)	An easy, intuitive service catalog to request software like Microsoft Office. Accelerated approval routing and faster fulfillment times. Automated notifications and real-time visibility into the request status.
