

Requirement Analysis

Data Flow Diagram & User Stories

Date	28-06-2026
Project Name	Software Installation Request Automation
Team ID	
Maximum Marks	

Part 1: Data Flow Diagram (DFD) - Simplified Flow Steps

- The User logs into the ServiceNow portal, navigates to the Service Catalog, and submits the Software Installation Request form.

- The ServiceNow System captures the request details and creates a Request (sc_request) and Requested Item (sc_req_item).
- The ServiceNow System ensures requesters receive notifications for submission.
- The workflow routes the request data to Approvers (Managers / Security Officers) for compliance validation and policy enforcement.
- Upon approval, the system generates a Catalog Task (sc_task) and auto-assigns it to the IT support/Software team.
- The IT Fulfiller (Software Support Team) views the backend record, installs the software on devices, and updates the task state.
- The system sends a final completion notification to the User.

User Stories				
User Type	Functional Requirement (Epic)	User Story / Task	Acceptance criteria	Priority
Requester (End User)	Request Submission	As an employee, I want to submit a software installation request via the Service Catalog so that I can easily get the software I need.	Request is successfully submitted and captures variables like Software Name, Version Required, and Urgency.	High

User Stories

Requester (End User)	Form Automation	As an employee, I want my details auto-populated on the form so that I don't have to type them manually.	The Requested For field defaults to the logged-in user, and Department and Location values are pulled dynamically from the user's profile.	Medium
Requester (End User)	Notifications	As an employee, I want to receive notifications regarding my request status so that I have visibility and transparent tracking.	Automated notifications are triggered for submission, approval, and completion.	High
Approver (Manager)	Request Approval	As an approver, I want an easy, structured approval process to securely authorize software installations.	Automated approval routing pauses the workflow until validation for compliance and licensing is completed.	High

User Stories

IT Fulfiller	Request Tracking	As an IT support team member, I want the system to automatically assign tasks so that I can track fulfillment.	A Catalog Task (sc_task) is auto-assigned to the IT support team with a clear short description.	High
IT Fulfiller	Dynamic UI & Validation	As an IT admin, I want to enforce mandatory validations so that the IT team receives complete request data.	Software-related details like Business Justification are mandatory, and incomplete submissions are prevented by UI Policies and Business Rules.	Medium
