Journey Map: Software Installation Request **Scenario:** An employee requests the installation of licensed software through the service catalog using the ServiceNow Service Portal.

Journey Phase	User Actions & Goals	Experience & Opportunities
1. Entice (Awareness)	Action: Realizes they lack the necessary software to complete their tasks and asks a colleague or checks IT docs, which direct them to the IT Portal. Touchpoints: Teams/Slack, Office environment. Goal: "Help me figure out how to get this software installed quickly."	[+] Relieved there is an easy, intuitive way to request software. [-] Frustrated by the initial roadblock preventing their work. Idea: Provide direct links to the software catalog in IT onboarding documents to reduce manual coordination.
2. Enter (Beginning)	Action: Logs into the ServiceNow Service Portal and searches for terms like "New Software" or browses the Software category.	+ The catalog item is clearly labeled and easy to locate using configured search terms (Meta tags). [-] Searching can be annoying if

	Touchpoints: Web browser, Service Portal interface. Goal: "Help me find the right form without clicking through confusing IT menus."	the catalog taxonomy does not align with organizational needs. Idea: Add a "Quick Links" section for commonly requested software on the portal homepage.
3. Engage (Core Process)	Action: Opens the "Software Installation Request" form, fills in variables (Software Name, Version Required, License Justification, Urgency), and clicks "Order Now". Touchpoints: Dynamic form fields and catalog variables. Goal: "Help me fill this out easily."	[+] Department and Location values are pulled dynamically from the user's profile, and mandatory fields prevent incomplete requests. [-] Confusion if license justification requirements are unclear. Idea: Provide Tooltip/Help Texts icons next to specific fields to assist users
4. Exit (Finishing)	Action: Receives a submission notification; the workflow routes to Approvers (Managers/Security Officers), and upon approval, auto-assigns a task to the Software Support Team. Touchpoints: Email inbox, Order Status page, ServiceNow backend. Goal: "Help me know my request isn't lost in a black hole."	[+] Transparent tracking is available, allowing users to see the Stage and Estimated Delivery Date on the Order Status page. [-] Anxiety while waiting in the approval state if managers take too long. Idea: Ensure automated notifications are instantly triggered at every stage (submission, approval, completion).
5. Extend	Action: Receives the final completion notification once the IT team installs the software on	[+] The software is successfully installed, enhancing the end-user experience with faster service

(Aftermath)	their device. Touchpoints: User's device, newly installed software application. Goal: "Help me get back to my actual job."	delivery. [-] Discovering a delay if an incident was automatically created due to a license shortage. Idea: Send an automated Customer Satisfaction (CSAT) survey one day later to rate the software fulfillment speed.
