

Project Design Phase

Solution Architecture

Date	28-06-2026
Project Name	Software Installation Request Automation
Team ID	
Maximum Marks	

Solution Architecture:

The solution architecture illustrates the complete workflow of the **Software Installation Request Automation** system on the ServiceNow platform. Users submit software requests through the Service Portal, where UI Policies and Client Scripts validate and capture the required information. The request is

then processed through automated workflows, Business Rules, and approval mechanisms before being stored in the ServiceNow core tables. Finally, tasks are assigned to the IT Support team, and the Notification Engine keeps users informed with real-time updates throughout the request lifecycle, ensuring a streamlined, transparent, and efficient software installation process.
